 transformer/transformer applications.
In automatic mode they enable the monitoring of, and the on load changeover switching between, two power supply sources, in accordance with the parameters configured via two potentiometers and four DIP switches.
They are intended for use in low voltage power systems where interruption of the load supply is acceptable during transfer.

## Advantages

## Rapid commissioning

ATyS t switches offer significant time saving during commissioning (process takes 2 to 3 minutes). Because they have only two potentiometers and four DIP switches, a simple screwdriver is all you need to configure the parameters.
For added simplicity, they also offer an autoconfiguration function which enables automatic adjustment of the rated voltage and frequency.

## Functions adapted to transformer/ transformer applications

ATyS t products are automatic changeover switches intended specifically for transformer/ transformer applications.
Their integrated controller has been designed to provide all the functions necessary for these applications, including monitoring the voltage and frequency of both sources, for three-phase and single-phase networks.

References

(1) See "Copper bar connection kits" page
(2) To fully shroud front, rear, top and bottom 4 references required.

To shroud front switch top and bottom 2 references required.
(3) 2 pieces: one for top side and another fअ9ß30ttom side.
(4) Factory mounting only.
(5) An optional key operated Auto/Manual selector is available on request. If required, this option must be requested when ordering the switch (ATyS, ATyS $d, t, g$ and $p$ ). To order this option simply add "-K" after the ATyS reference.
