## ATyS M

## From 40 to 160 A

## - Function

The ATyS M, dedicated to applications below 160A, enables the switching On Load of single or three phase sources in remote or automatic mode.
This Transfer Switching Equipment (TSE) is designed to be used in low voltage power systems for Open Transition Transfer applications.
This Transfer Switching Equipment (TSE) is composed of two mechanically and electrically interlocked switches.

- The ATyS M $\mathbf{3}$ (RTSE) is driven by voltfree dry contacts allowing switching operation between position I, 0, II, from an external control logic or a PLC (control relay type ATyS C30).
- The ATyS M 6 (ATSE) is dedicated to break before make automatic transfer applications. The ATyS M 6 integrates control relays, timers and test functions to manage a Normal/Backup switching operation between two networks or between a generator set and a network.
© General characteristics
- Isolation with positive break indication.
- On load switching.
- Manual emergency operation.
- 3 stable positions.(I, 0, II).
- Padlocking in 0 or in all three positions (I, O, II).
- AUTO / MANU selector.
- Command of the device in 0 position thanks to the energy storage device (ATyS M 6e).
- Single phase or three phase control on networks I and II (ATyS M 6s and M 6e).
- Electrical measurements (ATyS M 6e).
© Conformity

## © What you need to know

- On ATyS M 3s model

## Power supply

Single-phase interface Three-phase interface

ATyS M 3s is equipped with two independent 230 VAC (176-288 VAC), $50 / 60 \mathrm{~Hz}$ (45/65-65 Hz) power inputs.

These two supplies can be connected individually to switch I and switch II:

- Power supply I must be available to reach position I,
- Power supply II must be available to reach position II.

The 0 position is a stable transition position.
The use of a double power supply module (DPS) or an external supply enables the full security of the 3 position commands in all circumstances (from the available source). In this case, both supply inputs of the ATyS M 3s must be connected in parallel in order for them both to be supplied from the output of the DPS.

## - On ATyS M 6s and 6e models

## Power supply

ATyS M 6 products are self power supplied from incoming supplies: 230 VAC ( $176-288$ VAC for the ATyS M $6 s$ and $160-305$ VAC for the ATyS M $6 e$ e), $50 / 60 \mathrm{~Hz}$ ( $45-65 \mathrm{~Hz}$ ).
For three phase products: two different versions are available:

- 230 / 400 VAC with neutral conductor distributed: product is power supplied between phase and neutral,
- 127 / 230 VAC with or without neutral conductor distributed: product is power supplied between 2 phases.
For single phase products: one version is available:
- 230 VAC networks: product is power supplied between phase and neutral, The neutral conductor can be connected to the left or right side of the switch.

## Automatic control

The ATyS M 6e and M 6s are equipped with a sequence logic.

## Electrical control

The switching operation can be driven by an external volt free contact coming from an external control relay (ATyS C30 for example).The positions are stable in case of loss of supply. There are two types of command logic to chose from: impulse or contactor.

## - Impulse logic

-A switching command of at least 60 ms is necessary to initiate operation.

- Orders I and II have priority over order 0 .
- Order 0 must be maintained (joint connection 317).

## - Contactor logic

- If command I or II disappears, the device returns to zero position, if power supply is available. The first command (order) received (I or II) has priority as long as it remains present.

## Configuration

ATyS M 6s
Single-phase interface Three phase interface

Common points between the three-phase and single-phase versions:

- 2 potentiometers (Sector loss and return time delays)
- 2 dip-switches (Pause for 2 seconds in position 0 during the transitions $1<->\| l \mid$; Network-Network Application or Network-Genset).
- 4 LED's (Supplies status; Automatic mode; Fault)
- 3 inputs for external control (Inhibition of the automatic mode; Remote Test on load; Manual retransfer from standby supply to normal supply).
-1 NO bi-stable output relay for generator start /stop command ( 30 VDC / 2 A).
-1 NC relay for product availability ( $250 \mathrm{VAC} / 0.5 \mathrm{~A}$ ).
Three phase ATyS M specificities:
- 2 potentiometers (Nominal voltage; Voltage thresholds)
- 2 dip switches ( 50 or 60 Hz ; Network)

Specificity of the single phase ATyS M:

- PRG button: automatic voltage and nominal frequency programmation.

ATyS M 6e
Three phase interface

- 4 applications: Network/Genset, Network/Network, With or without priority. - Adjustable thresholds and hysteresis.
- Display + keyboard (Programming of the values; Visualization of the electrical readings; Test and control positions function; Visualization of the availability of supplies).
- LED's (Product Power On; Supplies status; Position of the switch status; Automatic mode TEST/CONTROL Mode; Fault)
- 3 configurable inputs for external control (Automatic mode inhibition; Test on load and off load; Manual retransfer; Electrical control of the switch in positions I, 0 or II; Change of priority network...).
-3 NO output relays ( $250 \mathrm{VAC} / 3 \mathrm{~A}$ ) , configurable (Availability of the supplies; Auxiliary position contacts; Load shedding control; Operational product...)
1 configurable bi-stable output relay for generator start /stop command ( $30 \mathrm{VDC} / 2 \mathrm{~A}$ ).
- Connection of a remote interface ATyS D10 or D20.
- A version with RS485 Communication, JBUS/Modbus protocol, is available.

## - Accessories

| Bridging bars | Use <br> To provide common point on either incoming or outgoing terminals. |
| :--- | :--- | :--- | :--- |

## Voltage sensing and power supply tap

## Use

To allow connection of $2 \mathrm{x} \leq 1.5 \mathrm{~mm}^{2}$ voltage sensing or power cables.
The voltage sensing tap can be mounted in all the terminals without reducing their connecting capacity.

| Rating $(\mathbf{A})$ | Lot de | Reference |
| :--- | :--- | :--- |
| $40 \ldots 160$ | 2 pieces | 13994006 |

Use
To have a full protection against direct contact with the connection terminals or parts. Terminal shrouds advantages Perforations enabling remote thermographic verification without dismantling.
Possibility of sealing.

| Rating (A) | Position | Reference |
| :--- | :--- | :--- |
| $40 \ldots 160$ | Top and bottom | 2294 4016 $^{(\mathbf{1})}$ |
| (1) Reference made of 2 pieces. |  |  |

## Use

Up to 2 auxiliary contacts accessory per product.
Each accessory integrates 1 NOC auxiliary contact (for each position I, 0 and II).
The ATyS M 3s is delivered in standard with 1 unit.

| Rating (A) | Reference |
| :--- | :--- |
| 4013090001 |  |

## Characteristics

250 VAC / 5 A maximum.
Use
Prevents access to the configuration panel of the ATyS M 6s.

| Rating (A) | No. of poles | Reference |
| :--- | :--- | :--- |
| $40 \ldots 160$ | 2 P | $1359 \mathbf{2 0 0 0}$ |
| $40 \ldots 160$ | 4 P | $1359 \mathbf{0 0 0 0}$ |

Dedicated to the implementation of a single phase ATyS M, it enables easy access to an IP41 compact supply switching solution.

| Rating (A) | $\mathbf{H} \times \mathbf{W} \times \mathbf{D}(\mathbf{m m})$ | Reference |
| :--- | :--- | :--- |
| $40 \ldots 160$ | $410 \times 305 \times 150$ | $1309 \mathbf{9 0 5 6}$ |

## Auto transformer

Use
The 400/230 Vac 400 VA auto transformer is used with the ATyS M 6 in case of threephase network without neutral.

Rating (A) $40 \ldots 160$

To use it with the ATyS M 6e version 230/400 Vac, the position of the neutral (right or left) and the product network type (3NBL) have to be configured in the programming mode.

## Double power supply - DPS

Use
Allows an ATyS M 3s to be supplied by two 230 VAC 50/60Hz networks.

Input

- The input is considered as "active" from 200 VAC.
- Maximum voltage: 288 VAC.
- Internal protection: fuse protected 3.15 A
- Terminal connections: max. $6 \mathrm{~mm}^{2}$.
- Modular device: 4 modules width.

| Input 1 | Input 2 | output |
| :--- | :--- | :--- |
| 230 VAC | O VAC | 230 VAC (Input 1) |
| 0 VAC | 230 VAC | 230 VAC (Input 2) |
| 230 VAC | 230 VAC | 230 VAC (Input 1) |
| 0 VAC | 0 VAC | 0 VAC |

Description of accessories
Reference
Des
15994001

Use
To connect between a remote interface (D10 or D20) and a control product (ATyS M 6e).
Characteristics: RJ45 8 straight non insulated cables, 3 m length.

| Type | Length | Reference |
| :--- | :--- | :--- |
| RJ45 cable | 3 m | 15992009 |

## Power connection terminals

Use
The power connection terminals allow conversion of the ATyS M cage terminals into bolt-on type connection terminals, allowing the connection of up to two

40 ... 160
13994017
$70 \mathrm{~mm}^{2}$ cables.
Each power connection terminal is provided with separation screens.
