

# IDE

## Load break switches for machine control Remotely trippable switch from 32 to 160 A

Load break  
switches

**IDE 4x40 A**  
External operation

**IDE 4x40 A**  
Direct operation

### The solution for

- > Industry.
- > Non critical buildings.
- > Public Access Sites.
- > High Rise Buildings.

### Strong points

- > Safety.
- > Easy to install.
- > Low consumption.

### Empty enclosure for IDE

- > This drilled pre-equipped IP65 enclosure enables immediate installation of a direct control rear mounted IDE without auxiliary contact.

### Function

IDE are manually operated multipolar load break switches with a remote tripping function.

They make and break under load conditions and provide safety isolation for any low voltage electric circuit, particularly for compliance with the machine directive.

### General characteristics

- Positive break indication.
- IP2X protection with terminal shrouds (accessory).
- Shunt trip or undervoltage trip coil.

### Advantages

#### Safety

Remote tripping is especially adapted for protection against automatic machine restart after isolation and restoration of the mains voltage (EN 60204.1 § 7.5).

#### Low consumption

The device coils (including undervoltage) have a low consumption, providing increased reliability.

#### Easy to install

As standard the IDE is supplied with its tripping coil factory fitted and with its connections made internally.

For IDE 125 and 160A a factory fitted auxiliary contact is supplied as standard, simplifying product installation. The various fixing systems (front or rear mount with direct or external operation) enable easy device implementation.

### What you need to know

- **Direct** and **external operation** handles are available for the IDE.
- IDEs are supplied in 3 or 4 pole versions, with two mounting types available:
  - rear mounting on a **back-plate** or **DIN-rail**, direct or external operation.
  - **door** or **panel** mounting, direct operation.

#### Direct operation

#### External operation

- Available in 230 or 400 VAC versions, the IDEs can be tripped remotely via a **shunt trip** or **undervoltage** coil. They are used to protect against automatic restarting and to prevent damage caused by the network malfunctions and is then re-established.
- Factory fitted, the IDE's tripping coil is connected internally. The coil is supplied between:
  - L1 and N for 230 VAC devices.
  - L1 and L2 for 400 VAC devices.
 For an IDE 32 A, an actuator relay can be incorporated between D2 and D14 (other wiring on request).

#### IDE 32 A

#### Internal cabling IDE 40 to 160 A
